Meven MENOU - Mechanical Design Engineer

meven.menou@gmail.com - 0431 016 422 - www.linkedin.com/in/mevenm/ - 50 Somerset St, Richmond VIC

*Mechanical Engineer specialised in **product design and industrialisation**, with proven experience delivering innovative products from R&D through to market launch. Strong technical background in manufacturing processes, 2D/3D CAD, and production support.* 👉 **Solidworks Portfolio** 🕮

*Currently engaged in a contract engineering mission to implement WindChill PDM/PLM x SolidWorks system for Quad Lock. **Notice period 4 weeks – Full work rights (partner visa)***

WORK EXPERIENCE

CAD and PDM Technician | Quad Lock **|** Melbourne (VIC) **04/2026 - ongoing**

Implementation of Windchill PDM system with SolidWorks for the world leader in phone case and mount solutions.

- Restructured and **migrated 10+ years of CAD** data across **90+ SKUs**, resolving broken references and standardising drawings and BOMs to establish a **single, reliable source of engineering data.**
- **Led the Windchill PDM migration**, developing a training website to ensure successful adoption of the new system.
- Updated 2D/3D templates and created the M-BOM structure, defining product configurations, revision workflows, and release processes in collaboration with technical management **to establish a structured product lifecycle.**

MECH & ELEC SUPERVISOR | Equans x Bouygues **|** Goorambat East Solar Farm (VIC) **7/2025 - 12/2025**

Promoted and supervised final-stage mechanical and electrical project work.

- Delivered mechanical installation in line with schedule, **managing 40 workers across 5 teams**
- Established on-site refurbishment workstations for defective components, **generating ~AUD 80k in cost recovery**
- Identified and escalated a major electrical cable routing, **avoiding AUD 1M+ in client-driven rework**
- Proposed a corrective action plan including **visual work instructions and team scale-up to 35 workers**
- Led end-of-scope inventories, site logistics, material recovery, and large-scale site clean-up activities

MECHANICAL TEAM LEADER | Equans x Bouygues **|** Goorambat East Solar Farm (VIC) **1/2025 - 6/2025**

Leading first-time deployment of the Omnitrack system, reading drawings and setting out site references.

- Performed and supervised a wide range of mechanical assembly operations across multiple teams
- Reported production issues, proposing corrective actions to **eliminate rework risk** and associated costs
- **Trained and upskilled team leaders** to standardise installation quality, safety and productivity
- Led mechanical rectification works in coordination with QA to achieve successful handover
- **Designed and fabricated** production tools to conducts specifics tasks

PRODUCT ENGINEER | In&Motion Airbags **|** Annecy (French Alps) **2/2022 - 9/2023**

End-to-end development of wearable motorcycle airbag systems from R&D to industrialisation.

- **Managed multiple project timelines and budgets** in coordination with industrial partners and supply chain team
- Designed and industrialised a deflation valve using **injection-moulded plastic** components suitable for ultrasonic welding, including **patent** filing to protect the invention
- Designed and industrialised a backpack buckle **integrating an electronic board,** enabling closure detection via a Hall-effect sensor with LED indication
- Engineered and built a ballistic test bench for airbag prototype validation
- Designed and implemented CNC-machined assembly and inspection **tools directly on production lines**
- Defined and executed test plans to ensure product compliance with road safety regulations

MECHANICAL ENGINEER | MoonBikes Motors **|** Annecy (French Alps) **8/2020 - 2/2021**

R&D, industrialisation and supervision of the initial serial production of the world's first electric snowbike.

- **Designed, prototyped, and industrialised multiple components**, including the speedometer, seat, frame parts, and electrical protection systems, all aligned with vehicle regulations
- Created mechanical and electrical assembly instructions, trained operators, and supervised daily production activities, **coordinating 20+ mechanical assemblers and electricians**
- Managed suppliers and subcontractors to meet an aggressive production timeline, successfully **delivering 50 units in 2 months** for the upcoming season

- Identified structural limitations in the existing CAD setup and drove the transition to SolidWorks, **restructuring the CAD system** to support future production and company growth
- Took responsibility for setting up the R&D workshop and tooling in the new facility

MECHANICAL DRAFTSPERSON | Chastagner Automotives **|** Le Mans (France) **5/2019 - 8/2019**

Delivered design and fabrication for the automotive industry while working for a subcontractor company.

- Designed and manufactured a large-scale **measurement tool** using CMM (Coordinate Measuring Machine) inspection for **final quality validation** of an automotive component
- Designed and produced a ventilated cooling system for a military radar, a **reliable and maintenance-free solution**

EDUCATION

2022 **Master - Mechanical Engineering** specialized in product design
2020 UTC - University of Technology of Compiegne (France)
University exchange in Mechanical Engineering Department
2019 UQAC - University of Quebec in Chicoutimi (Canada)
Equivalent to a Bachelor Degree with Honours
2019 **Bachelor - Mechanical and Production Engineering**
Equivalent to an Advanced Diploma
2017 IUT - University Institute of Technology of Le Mans (France)

TECHNICAL SKILLS

- Product design and 3D CAD modelling
- Technical 2D drawings and documentation
- CNC machining and sheet metal fabrication
- Plastic injection moulding and ultrasonic welding
- Quality control, inspection and validation
- Manufacturing support and production ramp-up

SOFTWARE

- Solidworks + WindChill 5/5
- Catia V5 | Creo 3/5
- Office Suite & MS Project 4/5
- Abaqus | AMEsim | Witness 2/5
- Python | HTML/CSS 2/5
- Sony Vegas | Photoshop | Illustrator 4/5

SOFT SKILLS

- Schedule & project deadline management
- Root cause analysis and problem solving
- Ability to bridge office and site operations
- Safety & risk awareness
- Team management

TICKETS

- White Card
- Working at Height
- Confined Space
- Gaz Testing
- Car & Motorcycle licence

ACADEMIC PROJECTS

Cellar restoration and installation of a craft beer production unit (120L/week) - University Brewing Association	2021
Concept design and scale modelling of a liveable bicycle trailer	2021
Pneumatic sheet metal handling tool design - Tefal (cookware manufacturer)	2020
3D printer reverse engineering project – measurement and CAD	2019
Drift-Trike vehicle design and build project – CAD, metrology, CNC machining, tube bending and welding	2019
